Stoupons Water Softener & RO Systems Knowledge Base

Internal product knowledge for customer support, sales, RAG, and AI-agent workflows

1. Purpose

This knowledge base standardizes the Water Softener and Reverse Osmosis (RO) product information supplied by Stoupons. It is intended for Stoupons employees, specialists, customer-service workflows, and AI agents. Agents should rely on approved information in this document and avoid inventing unsupported product claims.

2. Water Softener Capacity Options

Capacity	Configuration	Customer-Friendly Description
48,000 grain	One-tank water softener system	Entry capacity option for homes whose usage can be supported by a 48K system.
64,000 grain	One-tank XL system	Higher-capacity one-tank option for households with greater water-softening needs.
96,000 grain	Two-tank water softener system	Highest-capacity option currently documented for Stoupons; suited to larger or higher-usage homes when appropriate.

Final capacity selection should be based on the customer's household needs, water usage, and installation considerations.

3. Water Softener Technology Options

Capacity and technology are separate product choices. Stoupons currently documents three technology levels:

1. Standard
2. Bluetooth
3. Wi-Fi

Example Configuration
Capacity: 64,000 grains
Technology: Bluetooth

4. Standard Water Softener

The Standard Water Softener is the basic manual-control option.

- has approximately 2-inch LED display.
- Two or three physical control buttons.
- Uses default settings with basic manual adjustment.
- No mobile application.
- No remote-access capability.
- Controls are more mechanical and less app-oriented than the Bluetooth and Wi-Fi options.

Recommended use: rental properties, investment properties, or customers who prefer simple controls and do not need smart monitoring.

Stoupons Classification
Standard = Manual system

5. Bluetooth Water Softener

The Bluetooth Water Softener includes a mobile application. The customer can connect to the system when the phone is within Bluetooth range.

Supported App Functions

- Salt level: view the salt level and reset/update the level after adding salt.
- Water hardness: view and adjust supported hardness settings when the customer feels the water is too hard or too soft.
- Regeneration cycle: view or adjust supported regeneration timing.
- Additional supported system settings may be viewed or updated through the app.

Regeneration is the water-softener cleaning cycle. Based on the product information supplied to Stoupons, it may typically run about every two to three weeks depending on water usage. It commonly runs around 2:00 AM; if the operating noise is inconvenient, the supported time can be adjusted.

Bluetooth Limitation

Bluetooth is range-limited. Once the customer moves outside Bluetooth communication range, the active app connection is lost.

Stoupons Classification
Bluetooth = Semi-automatic system

6. Wi-Fi Water Softener

The Wi-Fi Water Softener is the most connected and automated option currently documented by Stoupons. It includes an additional hub/connectivity device that connects to the customer's home internet.

- Includes the supported functionality available with the Bluetooth option.
- Can provide supported remote access while the home internet and system connection are available.
- Includes additional leak-detection functionality.
- Designed for greater automation and remote monitoring.

7. Wi-Fi Leak Detection

The Wi-Fi package includes leak-detection devices that may be placed near the water softener and the RO system. When a monitored leak is detected, the leak device communicates with the water-softener system so the system can automatically shut off the water without waiting for the homeowner to take manual action.

Stoupons Classification
Wi-Fi = Fully automatic system

8. Technology Comparison

Feature	Standard	Bluetooth	Wi-Fi
Physical controls	Yes	Yes	Yes

Feature	Standard	Bluetooth	Wi-Fi
Approx. 2-inch LED display	Yes	Yes	Yes
Mobile app	No	Yes	Yes
View/update supported app settings	No	Yes	Yes
Salt-level monitoring	No	Yes	Yes
Hardness adjustment through app	No	Yes	Yes
Regeneration timing through app	No	Yes	Yes
Remote access beyond Bluetooth range	No	No	Yes
Leak detection	No	No	Yes
Automatic leak response	No	No	Yes
Stoupons classification	Manual	Semi-automatic	Fully automatic

9. Reverse Osmosis (RO) Systems

Stoupons currently documents two primary RO configurations:

1. Tank RO System
2. Tankless RO System

10. Tank RO System

- Typically includes approximately four to five physical filters.
- Stores approximately 3 to 3.5 gallons of filtered water.
- Uses a storage tank, so it requires more under-sink space.
- Filtered water is stored and ready for use.
- Because water is already stored, the initial faucet flow/pressure can be stronger than a tankless system.

11. Tankless RO System

- Uses three long filter cartridges.
- Stoupons internally considers the configuration approximately equivalent to six filtration stages.
- Requires an electrical connection.
- Produces filtered water on demand instead of storing it in a traditional large tank.
- Has a modern, modular design.
- Generally requires less under-sink space than a tank system.
- Because it produces water on demand, its water-flow characteristics can differ from a stored-water tank system.

12. Tank vs. Tankless RO

Feature	Tank RO	Tankless RO
Water storage	Yes	No traditional large storage tank
Approx. stored capacity	3–3.5 gallons	On-demand production
Electricity	Generally not required for basic stored-water delivery	Required
Physical filter configuration	Approx. 4–5 filters	3 long cartridges
Stoupons filtration description	Based on installed configuration	Approx. 6 filtration stages

Feature	Tank RO	Tankless RO
Under-sink space	More	Less
Design	Traditional	Modern / modular
Water delivery	Stored filtered water	Filtered on demand

Neither option should automatically be described as universally better. The recommendation should consider cabinet space, electrical availability, water-use preferences, and the customer's preferred design.

13. Optional Alkaline Filter

An alkaline filter is an optional add-on and can be paired with either a Tank RO or a Tankless RO system.

Approved Customer Answer
"Alkaline filtration is available as an optional upgrade for both Tank and Tankless RO systems. We can check your selected package to confirm whether it is included or available as an add-on."

AI agents should not make unapproved medical, mineral-content, pH, or health-benefit claims about alkaline filtration.

14. RO Faucet Color Options

Customers can choose one RO faucet finish from the following options:

- Black
- Gold
- Steel
- Nickel

The selected finish should be recorded as part of the order, subject to availability.

Recommended Order Attribute
ro_faucet_color = black | gold | steel | nickel

15. Water Softener Warranty

Stoupons customers receive a lifetime warranty on the water softener system. For Stoupons purposes, the life of the water softener is defined as up to 10 years from the applicable installation date.

Approved Customer Answer
"Your water softener comes with a lifetime warranty. Stoupons defines the lifetime of the water softener as up to 10 years."

Agents should not promise coverage for a specific part, labor charge, repair, replacement, damage, or exclusion unless that detail is separately documented in an approved warranty policy.

As the Water softener stays in garage or outside home, any damages caused by human error such as accidents (breaking something) does not get covered under warranty. Only Electrical and mechanical failures are covered.

WARRANTY: For the LIFETIME of the system, the system will not rust, leak, corrode, burst, or in any other manner fail to perform proper functions. Our Specialists Insures a Lifetime Warranty on all parts involved in the whole home water treatment system. The customer will never purchase any replacement hardware for the Whole Home System. For the LIFETIME of the Media, the MEDIA BED is guaranteed to be free of defects in materials and workmanship to reduce

chlorine and chloramine, as well as produce soft water. For the first 12 months after installation, Specialist insures a full labor warranty. Service Calls after 12 months will result in a trip charge dependent on the customer's location.

16. Structured Product Configuration

Attribute	Example
Water Softener Capacity	64,000 grains
Technology	Bluetooth
RO Type	Tankless
Alkaline Filter	Yes
RO Faucet Color	Black
Water Softener Warranty	Up to 10 years

17. AI / RAG Guardrails

1. Do not invent product features, warranties, installation claims, or health benefits.
2. Treat capacity (48K / 64K / 96K) separately from technology (Standard / Bluetooth / Wi-Fi).
3. Do not automatically recommend the most expensive system; base recommendations on customer needs.
4. Use simple customer labels: Standard = Manual, Bluetooth = Semi-automatic, Wi-Fi = Fully automatic.
5. Never describe Bluetooth as remote access beyond Bluetooth range.
6. Treat alkaline filtration as optional unless the selected package explicitly includes it.
7. Offer all four documented faucet colors: Black, Gold, Steel, and Nickel.
8. Describe the lifetime warranty consistently as up to 10 years for the water softener.
9. Do not make unsupported medical or health claims about softened, RO, or alkaline water.
10. Consider the warranty as specified in this document, do not assume anything additional. In doubt, create an email to support@stoupons.com

18. Recommended RAG Metadata

Metadata Field	Suggested Values
category	water_treatment
product	water_softener | reverse_osmosis
capacity	48000 | 64000 | 96000
technology	standard | bluetooth | wifi
ro_type	tank | tankless
feature	alkaline_filter | faucet_color | leak_detection
policy	warranty
warranty_period	10_years
status	approved
version	1.0

19. Example Customer Questions

Q: What is the difference between Bluetooth and Wi-Fi?

A: Bluetooth lets you view and adjust supported settings through the app while you are within Bluetooth range. Wi-Fi connects through your home internet, supports remote access, and includes additional leak-detection functionality.

Q: Should I choose Tank or Tankless RO?

A: A Tank RO stores approximately 3 to 3.5 gallons of filtered water and uses more under-sink space. A Tankless RO produces water on demand, requires electricity, and has a more compact, modern design.

Q: What faucet colors are available?

A: Black, Gold, Steel, and Nickel, subject to availability.

Q: How long is the warranty?

A: The water softener includes a lifetime warranty, which Stoupons defines as up to 10 years.

20. Knowledge Governance

This document should be treated as the approved internal source for the Water Softener and RO details captured above. Any change to capacities, technology, warranty, filters, pricing, installation, maintenance, or specialist obligations should be updated in the knowledge base before AI agents use the new information.
